

RTU Course "Enterprise Information Technology Architecture, Applications and Integration"

33000 Faculty of Computer Science, Information Technology and Energy

Genera	1	da	ta

Course title	General data	
Compuse status in the programme Compulsory/Courses of Limited Choice Responsible instructor Janis Grabis Academic staff Janis Pekša Volume of the course: parts and credits points LV, EN Annotation Commercially available enterprise information systems are often used in implementation and automation of enterprise business processes. The objective of the course is to master main principles of enterprise information systems, their deployment and modification. Main topics covered in the course are business process modeling, apication of ERP, workflow and other enterprise systems in process automation, modification and deployment of enterprise information systems, integration of enterprise information on the process and skills in the framework of overall enterprise information of enterprise systems are explored in laboratories. To learn various alternatives of using enterprise applications for automation of business processes in the framework of overall enterprise information technology architecture There are two main assignments: I. Readings – students search for scientific papers devoted to subject areas given by an instructor and write synopsis of these papers. 2. Business process automation proposal – students find the most appropriate solution for automating a selected business process automation problem, perform fit-gap analysis and design necessary modifications. Methods for completing the assignment are discussed during lectures, students submit intermediate deliverables during the course and present their solution at the end of the course. Recommended literature Obligatão/Obligatory: I. Dumas, M. et al. (2018), Fundamentals of Business Process with ERP Systems, Wiley. 3. Weston (2019) Learn Microsoft PowerApps, Pack Publishing. Papildu/Additional: I. Grabis, J. (2019), Optimization of Gaps Resolution Strategy in Implementation of ERP System In Proceedings of the 21st International Conference on Enterprise Information Systems - Volume I: ICEIS, ISBN 978-989-788-372-2. 2. Grabis, J. Predict	Code	DE0738
Janis Grabis	Course title	Enterprise Information Technology Architecture, Applications and Integration
Annotation Annotation Annotation Commercially available enterprise information systems are often used in implementation and automation of enterprise business processes. The objective of the course is to master main principles of enterprise systems, the information systems, their deployment and modification, Main topics covered in the course are business processes. The objective of the course is to master main principles of enterprise systems in process automation, modification and deployment of enterprise information systems, such enterprise and adoption service-oriented computing in enterprise systems. Technologies for the modification and deployment of enterprise information systems and adoption service-oriented computing in enterprise and skills Structure and tasks of independent studies There are two main assignments: 1. Readings – students search for scientific papers devoted to subject areas given by an instructor and write synopsis of these papers. 2. Business process automation proposal – students find the most appropriate solution for automating a selected business process automation problem, perform fit-gap analysis and design necessary modifications. Methods for completing the assignment are discussed during lectures, students submit intermediate deliverables during the course and present their solution at the end of the course. Recommended literature Obligata/Obligatory: 1. Dumas, M. et al. (2018), Fundamentals of Business Processes Win ERP Systems, Wiley. 3. Weston (2019) Learn Microsoft PowerApps, Packt Publishing. Papildu/Additional: 1. Grabis, J. (2019), Optimization of Gaps Resolution Strategy in Implementation of ERP Systems In Proceedings of the BIR 2019 Workshops and Doctoral Consortium. Joint Proceedings of the BIR 2019 Workshops and Doctoral Consortium. Joint Proceedings of the BIR 2019 Workshops and Doctoral Consortium. Joint Proceedings of the BIR 2019 Workshops and Doctoral Consortium. Joint Proceedings of the BIR 2019 Workshops and Doctoral Consortium Joint Proceedings of	Course status in the programme	Compulsory/Courses of Limited Choice
I part, 6.0 credits	Responsible instructor	Jānis Grabis
Annotation Commercially available enterprise information systems are often used in implementation and automation of enterprise business processes. The objective of the course is to master main principles of enterprise information systems, their deployment and modification. Main topics covered in the course are business process modeling, application of ERP, workflow and other enterprise systems in process automation, modification and deployment of enterprise information systems, integration of enterprise information systems and adoption service-oriented computing in enterprise systems. Technologies for the modification of enterprise systems are explored in laboratories. Tolean various alternatives of using enterprise applications for automation of business processes in the framework of overall enterprise information technology architecture. There are two main assignments: 1. Readings – students search for scientific papers devoted to subject areas given by an instructor and write synopsis of these papers. 2. Business process automation proposal – students find the most appropriate solution for automating a selected business process automation problem, perform fit-gap analysis and design necessary modifications. Methods for completing the assignment are discussed during lectures, students submit intermediate deliverables during the course and present their solution at the end of the course. Recommended literature Obligatia/Obligatory: 1. Dumas, M. et al. (2018), Fundamentals of Business Process Management, Springer. 2. Magal, S., Word, J. (2013), Integrated Business Processes Management, Springer. 2. Magal, S., Word, J. (2013), Integrated Business Processes Management, Springer. 2. Magal, S., Word, J. (2013), Integrated Business Processes with ERP Systems, Wiley. 3. Weston (2019) Learn Microsoft PowerApps, Packt Publishing. Papildu/Additional: 1. Grabis, J. Predicting Next Wave of Digitalization: Towards a Theory of Evolution of Enterprise and proceedings of the 21st International Conference on Enter	Academic staff	Jānis Pekša
Commercially available enterprise information systems are often used in implementation and automation of enterprise business processes. The objective of the course is to master main principles of enterprise information systems, their deployment and modification. Main topics covered in the course are business process modeling, application of ERP, workflow and other enterprise systems in process automation, modification and deployment of enterprise information systems, integration of enterprise information systems and adoption service-oriented computing in enterprise systems, integration of enterprise information of systems and adoption service-oriented computing in enterprise and skills To learn various alternatives of using enterprise applications for automation of business processes in the framework of overall enterprise information technology architecture There are two main assignments: 1. Readings – students search for scientific papers devoted to subject areas given by an instructor and write synopsis of these papers. 2. Business process automation proposal – students find the most appropriate solution for automating a selected business process automation problem, perform fit-gap analysis and design necessary modifications. Methods for completing the assignment are discussed during lectures, students submit intermediate deliverables during the course and present their solution at the end of the course. Recommended literature Obligātā/Obligatory: 1. Dumas, M. et al. (2018), Fundamentals of Business Processes with ERP Systems, Wiley. 3. Weston (2019) Learn Microsoft PowerApps, Packt Publishing. Papildu/Additional: 1. Grabis, J. (2019). Course contents

Content		Full- and part-time intramural studies		Part time extramural studies	
	Contact Hours	Indep. work	Contact Hours	Indep. work	
Introduction: Enterprise value chain and enterprise applications	4	6	0	0	
Enterprise Information Technology architecture and COTS applications	4	6	0	0	
Enterprise Resource Planning (ERP) Systems: Introduction	6	9	0	0	
Implementation of ERP systems	4	6	0	0	
Methodologies of implementation of ERP systems	4	6	0	0	
Modification of ERP systems	8	12	0	0	
Vendors of ERP systems	4	6	0	0	
Configuration of enterprise applications	4	6	0	0	
Enterprise portal	4	6	0	0	
Workflow systems	8	12	0	0	
Composite applications	4	6	0	0	
Enterprise integration and integration standards	4	6	0	0	
Current trends in enterprise Information technology architecture and applications	4	6	0	0	

Course summary	2	3	0	0
Total:	64	96	0	0

Learning outcomes and assessment

Learning outcomes	Assessment methods
To know main functional capabilities of enterprise applications and their application areas	Test
Ability to select the most appropriate solution for business process automation	Coursework and examination
To understand implementation life-cycle of enterprise applications and main implementation activities	Examination
Ability to document implementation of enterprise applications	Coursework
Ability to configure enterprise applications and to modify user interface, reports and elements of enterprise portal	Laboratory work
Ability to orchestrate executable business processes and knowledge of integration standards	Laboratory work

Evaluation criteria of study results

Criterion	%
Reading assignment	10
Mid-term exam	30
Course work	20
Exam	40
Total:	100
