Study programme "Total Quality Management"

Main attributes				
Title	Total Quality Management			
Identification code	ICK0			
Education classification code	42526			
Level and type	Professional Bachelor (First Cycle) Studies			
Higher education study field	Management and Administration, Real Estate Management			
Head of the study field	Inga Lapiņa			
Department responsible	Faculty of Engineering Economics and Management			
Head of the study programme	Inga Lapiņa			
Professional classification code	2423			
The type of study programme	Full time, Extramural			
Language	Latvian			
Accreditation	26.05.2021 - 27.05.2027; Accreditation certificate No 2022/35			
Volume (credit points)	240.0			
Duration of studies (years)	Full time studies - 4,0; Extramural - 5,0			
Degree or/and qualification to be obtained	Professional bachelor degree in quality management / engineer in process quality management			
Qualification level to be obtained	The 6th level of European Qualifications Framework (EQF) and Latvian Qualifications Framework (LQF); the 6th level of professional qualification			
Programme prerequisites	General or vocational secondary education			

Description

Description		
Abstract	Nowadays, Quality Management is an integral part of operations of any organization. Quality management and conformity assessment are the tools assisting to create such an organizational environment, where processes, products and services meet the needs and expectations of customers/ clients, are safe and reliable in use, as well as creating value both for the society and environment. Students of the professional bachelor study programme acquire the necessary knowledge, skills and competencies for comprehensive and effective work in the field of quality management. Study programme graduates are able to develop processes; to implement and monitor development activities; to develop, implement, manage and improve the quality management system; to analyse, evaluate, form, disseminate and put into practice quality management methods in order to facilitate the ongoing effectiveness and efficiency of business performance, and to be aware of the interests of organisation's stakeholders. Study programme graduates are able to work as quality managers, quality engineers, quality management system specialists at organizations and companies of various types and sizes in different branches of industry and areas of activity.	
Aim	The aim of the study programme is to prepare Engineers in Process Quality Management - specialists in quality system engineering, quality assurance, conformity assessment and risk management, to develop students' understanding of professional ethics and socially responsible management, to broaden their vision, as well as form a basis for further studies to acquire a higher level of knowledge and competence.	
Tasks	 The general tasks of the study programme are as follows: to ensure a competitive bachelor's level education corresponding to international standards in quality engineering and conformity assessment; to provide students with a comprehensive knowledge, to develop special skills and competencies required in the labour market for quality managers or process quality engineers, to train students for practical work; to ensure development and amendments to the content of the study programme, the study process and research work in line with the changes in the field of quality management and conformity assessment, international practice, science and didactic; to develop students' interest in further professional development, further perfection of academic knowledge, as well as develop students' research skills and facilitate their application; to stimulate students' interest in social processes, to enable them to develop into positive, modern, reliable, ethical and capable individuals, who can act independently and take autonomous decisions; to encourage interaction between the academic staff and students in the development of research work and practical use of the research results in quality management and conformity assessment in various organisations, and promote international mobility and participation in projects. 	

Learning outcomes The graduates of the study programme: - are able to develop and implement an organization's quality management system taking into account stakeholder interests, quality risks, and normative acts, standards and other equivacents applicable to systems, products and process quality, perform quality measurements and identification and assessment of caladed risks; - are able to identify the lineous and risks influencing the quality, perform quality measurements and identification and assessment process; - are able to plan and implement a conformity assessment process quality measurements and identification and assessment process; - are able to plan and implement a conformity assessment process and their interaction, understand the key, - are able to plan and improve organization and assess the costs associated with quality loss; - are able to evaluate and improve organization and assess the costs associated with quality loss; - are able to evaluate and improve organization and assess the costs associated with quality loss; - are able to evaluate and improve organization and assess the costs associated with quality loss; - are able to evaluate and improve organization and assess the costs associated with quality loss; - are able to evaluate and improve organization and assess the costs associated and the interaction interaction the theologies; - are able to evaluate and improve organization and assess the costs associated with quality los; - are able to evaluate and improve organization and defence of a bashelogit to vork individually and in a team, cont		
Final/state examination procedure, assessmentStudy programme is concluded with the state examination, where the elaboration and defence of a bachelor's thesis in a public session of the State Examination Commission (SEC) is a constituent part of this examination. At the same time, the acquisition of key fundamental, theoretical and field-specific professional knowledge is tested. The state examination demonstrates students' ability: - to find, summarise and analyse academic and professional literature and information (including literature in the English language); - to earry out independent or group research on a specific problem in quality or quality management and/or conformity assessment of products, processes and systems, which is topical and significant for the organisation; - to earry out independent or group research on a specific problem in quality or quality management and/or conformity assessment of products, processes and systems, which is topical and significant for the organisation; - to draw conclusions and to formulate appropriate recommendations; - to present the prepared recommendations and to defend their personal professional opinion. The SEC consists of at least five members. The chair and at least half of the panel is composed of representatives of professional organisational systems and process management methods, measurements, evaluation, conformity assessment and improvement techniques. They are familiar with the classification of basic operations, support and management processes, process identification, process efficiency and effectiveness measurement principles and process characteristics. They are familiar with the classification and the quality of is products. They identify and assess quality risks, and prepare recommendations for risk mitigation and prevention measures. They design and manage the implementation of quality management and ecoleponent methods to foster cont	Learning outcomes	 are able to develop and implement an organization's quality management system taking into account stakeholder interests, quality risks, and normative acts, standards and other requirements applicable to systems, products and processes; are able to identify, evaluate and monitor process quality, use process quality assessment methods and tools appropriate to the organization's needs, analyse and interpret the received data; are able to identify the factors and risks influencing the quality, perform quality measurements and identification and assessment of related risks; are able to plan and implement a conformity assessment program and to organise and participate in the internal and external quality assessment process; are able to plan the resources needed to ensure and develop the quality of systems, processes and products, determine the competence and authority of the personnel involved, manage quality development, risk prevention and mitigation activities; are able to evaluate and improve organizational processes and their interaction, understand the key performance indicators of an organisation and assess the costs associated with quality loss; are able to systems, processes and products, within the scope of their authority; are able to carry out research according to the bachelor's level studies with added value in the field of quality management and/or conformity assessment, use information and communication technologies, analyse, interpret and present the results; are able to work individually and in a team, continue professional development, act ethically and
- to draw conclusions and to formulate appropriate recommendations; - to present the prepared recommendations and to defend their personal professional opinion. The SEC consists of at least five members. The chair and at least half of the panel is composed of representatives of professional organisations or employers from the industry. Students' knowledge, skills and competence are assessed collegially by the SEC on a 10-grade scale.Description of the future employmentProcess quality engineers arrange the development of recommendations for the use of technical, technological and organisational systems and process management methods, measurements, evaluation, conformity assessment and improvement techniques. They are familiar with the classification of basic operations, support and management processes discusses, and are able to use quality management and development methods to foster continuous improvement of the efficiency of the organization and the quality of its products. They identify and assess quality risks, and prepare recommendations for risk mitigation and prevention measures. They design and manage the implementation of quality management systems, plan and carry out quality system audits. They ensure that the organisation's systems, processes and products meet customer requirements and needs without harming society or the environment. They are aware of the interests of the organisation's management systems in accordance with the organisation's aims and development strategy. They perform their duties in compliance with industry- specific normative acts, standards and other requirements that apply to processes and products; encourage learning from the experience of competitors and other organisations, and understanding of good management. Study programme graduates are able to work as process or sole proprietors, work in public administration or commercial organisation sete. </td <td></td> <td>Study programme is concluded with the state examination, where the elaboration and defence of a bachelor's thesis in a public session of the State Examination Commission (SEC) is a constituent part of this examination.
