Genera	ıl data

Course title	General data	
Course status in the programme Responsible instructor Märite Kirikova Academic staff Pëteris Rudzājs Volume of the course: parts and credits points Language of instruction LV, EN Annotation The study course presents basic approaches to requirements engineering. Students learn to identify and design enterprise/business architectures and specify requirements for organisational information systems viewing people and computer systems as nodes of information processing. They learn to analyse and evaluate information logistics in organizations. Acquired knowledge is beneficial not only for requirements identification for information and communication technology solutions; it is applicable also for the design of products and services in general.  The goal of the study course is to provide knowledge, understanding and skills in the identification, representation and management of requirements while respecting the enterprise architecture of organizations. The tasks of the study course:  1. To provide an understanding of business architecture and requirements engineering standards and their evolvement dynamics.  2. To provide awareness of the range of methods used in requirements engineering.  3. To develop the ability to reflect and evaluate enterprise architecture and its changes.  4. To develop the ability to reflect and evaluate enterprise architecture and its changes.  8. To develop the ability to reflect and evaluate enterprise architecture and its changes.  8. To develop the ability to reflect and evaluate only the study course are studied in depth, including preparation for the exam. Correspond to each course topic, there also are Individual tasks where the student independently develops and evaluates business models for a problem domain of his own erboice.  8. Designatory:  1. ## Course contents

Content	Full- and part-time intramural studies		Part time extramural studies	
	Contact Hours	Indep. work	Contact Hours	Indep. work
The scope of advanced requirements engineering. Standards in requirements engineering. Cognitive psychological and ethical issues in requirements engineering.	8	14	0	0
Problem oriented requirements engineering.	8	12	0	0
Enterprise modeling and requirements engineering.	8	8	0	0
Information logistics.	4	12	0	0
Enterprise architecture: the frameworks and description language.	16	20	0	0
Other approaches in requirements engineering (value based and agent based requirements engineering).	8	12	0	0
Variability management in requirements engineering.	4	6	0	0
Decision model and notation.	4	6	0	0
Requirements management and continuous requirements engineering.	4	6	0	0
Total:	64	96	0	0

Learning outcomes and assessment

Learning outcomes and assessment	
Learning outcomes	Assessment methods
Understands the goals, scope and problems of enterprise architecture and requirements engineering.	Demonstrate this understanding by solving tasks in the exam.
	Correct answers in individual or group assignments and/or the exam.
Is able to use and evaluate requirements engineering methods and tools.	Correct answers in individual or group assignments and/or the exam.
Is able to represent and evaluate the As-Is and To-Be states of an enterprise architecture.	Enterprise architecture models developed and evaluated in individual and/or group assignments and the exam.
Is able to suggest systemic information technology solution according to the business needs.	Defines requirements for information technology solution systemically for the business needs of the case chosen in individual assignment and the case given in the exam.

Evaluation criteria of study results

Criterion		%
The results of individual and group assignments (at least 40% of the maximum of points should be achieved)		50
Exam (at least 40% of the maximum of points should be achieved)		50
	Total:	100
